You may ask yourself, "Why is the logo for the Greenway Disc Golf Course a lighthouse? There is no water on the course." The answer lies within one of Americas largest public works program ever; the Florida barge canal. In the mid 1930's, FDR began construction a waterway to connect the Atlantic Ocean with the Gulf of Mexico. The plan was to use existing rivers (the St. Johns, the Ocklawaha, and the Withlacoochee), then build a series of locks and canals similar to the shorter Panama Canal. The Straits of Florida were difficult to navigate, so the idea was to save ships and money by going across Florida rather then around it. So the digging began. After a couple of years the project was halted. Opposition from Landowners and Environmentalists killed the project. The state owned land was made a public park under the request of Marjorie Harris Carr in the 1980's. The contiguous park stretches across Florida, and provides many opportunities for Hiking, Kayaking, Mountain Biking and Equestrian Activities. The Florida National Scenic Trail crosses the disc golf course on hole 12. Evidence of the digging is visible on holes 6, 6c, 7, 8, 9 (One side of the canal), and 10, 11, 12, 14, 15, and 17 (The other side of the canal). So when you see the lighthouse, know that this could have been the site where ships from all over the world crossed Florida.
